Heat Tape Installation Requirements

When installing heat tape that is sold by the foot, the heat tape must be terminated using the manufacturer-approved power connection and end termination kits.

Extension cord ends (cord caps) **must not be installed or terminated directly on heat tape**. Only approved heat tape power connection kits and end termination kits are permitted.

Please refer to the manufacturer's installation instructions to ensure the correct, approved power connection and end termination kits are used.

All installations must comply with the manufacturer's requirements and applicable electrical codes.
