Introduction

The Traffic Collision Information System (TCIS) is a computer-based system that compiles information on traffic collisions occurring throughout the Northwest Territories (NWT).

Information in this publication is derived from the Motor Vehicle Collision Report forms that are completed by Royal Canadian Mounted Police (RCMP) detachments in accordance with Section 262 of the *Motor Vehicles Act*. The collection of this valuable data is made possible by the efforts and dedication of the many RCMP officers across the NWT who complete the forms from their collision investigations.

This publication contains useful information on issues such as drinking and driving, unsafe speed, young and old drivers, and use of occupant restraints that affect crashes and their severities. This report is organized into 12 sections. The contents of each section are described below.

Introduction (français)

Le Système d'information sur les collisions de la route (SICR) est un système informatisé qui permet de compiler des données sur les collisions routières qui se produisent aux Territoires du Nord-Ouest (TNO).

Les renseignements contenus dans la présente publication proviennent des formulaires de rapport de collision de véhicules automobiles remplis par les détachements de la Gendarmerie royale du Canada (GRC) conformément à l'article 262 de la *Loi sur les véhicules automobiles*. La collecte de ces données utiles est rendue possible grâce aux efforts et au dévouement des nombreux agents de la GRC de l'ensemble des TNO qui remplissent les formulaires à la suite de leurs enquêtes sur les collisions.

La présente publication contient des renseignements utiles sur des sujets comme la conduite en état d'ébriété, les excès de vitesse, les jeunes conducteurs et les conducteurs âgés et l'utilisation de dispositifs de retenue des occupants, qui ont une incidence sur les collisions et leur gravité. Ce rapport est divisé en 12 sections. Le contenu de chaque section est décrit ci-dessous.

Quick Facts

2023 QUICK FACTS REPORT

2023 Compared to 2022

	<u>2022</u>	<u>2023</u>	<u>% Change</u>
PROPERTY DAMAGE ONLY COLLISIONS	360	353	-1.9
PERSONAL INJURY COLLISIONS	66	57	-13.6
FATAL COLLISIONS	1	4	300.0
TOTAL REPORTED COLLISIONS	427	414	-3.0
NUMBER OF PERSONS KILLED	1	4	300.0
NUMBER OF PERSONS INJURED	83	85	2.4
NWT HIGHWAY SYSTEM COLLISIONS	83	71	-14.5
RURAL COLLISIONS	6	3	-50.0
COLLISIONS IN COMMUNITIES	338	340	0.6
REGISTERED VEHICLES	41,930	42,410	1.1
LICENSED DRIVERS	26,471	26,823	1.3
NWT POPULATION [1]	45,605	44,972	-1.4
COLLISIONS PER 100 LICENSED DRIVERS	1.61	1.54	-4.3
COLLISIONS PER 100 REGISTERED VEHICLES	1.02	0.98	-4.1
COLLISIONS PER 100 POPULATION	0.94	0.92	-1.7
COLLISIONS INVOLVING ALCOHOL	26	21	-19.2

[1] 2022 and 2023 population from NWT Bureau of Statistics July 1 estimate published in 'Quarterly Report', March 2024.

Section Summaries

Section 1 - Historical Trends

This section illustrates the 35-year history of collisions, victims and licensed drivers and vehicles. There was a total of 414 collisions reported in 2023. This is the lowest number of collisions since the inception of TCIS in 1989. Reporting definitions remained the same from 1989 to 2011.

Starting in 2012, the monetary threshold for reporting property-damage-only collisions increased from \$1,000 to \$2,000. Trends in injuries, property-damage collisions and total collisions declined steadily between 1989 and 1998. This decline took place in spite of the increased population and number of licensed drivers and registered vehicles. Total collisions and property-damage-only collisions increased between 1998 and 2008. Since 2008, the total number of collisions has been declining along with the number of persons sustaining injuries.

Because of the small number of fatal collisions in the NWT, trends are difficult to identify and are subject to year-to-year fluctuations. There were four traffic fatalities reported in 2023, which is near the 35-year average, while the 85 persons injured in 2023 is considerably less than the historic average.

Section 2 - Time of Occurrence

Section 2 shows the distribution of collisions by time of day, week and month. The highest number of collisions occurred during the winter months, November to March. Conversely, injury-producing collisions are more likely to occur during the summer months.

Collisions are most likely to take place during the late afternoon and early evening. More collisions take place on Fridays and Saturdays than on Sundays and weekdays.

Section 3 - Major Contributing Factors

Contributing factors are those circumstances or factors that the reporting police officer perceives to have directly contributed to the collision or its severity. Factors are selected from four categories: driver condition, driver action, vehicle condition and driving environment.

Driver condition is nearly three times as prevalent in injury and fatal collisions (13%) than in all collisions (5%). Driver error accounts for 72% of all factors in collisions, as compared to vehicle condition (less than 1%) and environmental condition (5%).

Section 4 - Environmental Factors

The driving environment consists of road, light and weather conditions, as well as events leading up to and during a collision. It is important to understand all these factors to properly design effective countermeasures for reducing collisions. Section 4 provides a breakdown of collisions for each of the different driving environments by severity and road system.

Most collisions occur under favorable conditions, such as clear weather, daylight and on a road surface that is free of defects. Intersection-related collisions are far more frequent in communities than in rural areas or on the NWT highway system.

Section 5 - Driver Factors

This section describes the characteristics of drivers involved in collisions. In 2023, 624 drivers were involved in 414

collisions. This is an average of 1.51 drivers per collision. Details on driver age, gender, condition, action and class of license is presented.

Of particular interest and concern is the over-representation of young drivers in collisions. Drivers aged 15 to 19 years are 50% more likely to be involved in a collision than drivers aged 35 to 44 years. On August 1, 2005, the Graduated Driver Licensing Program was introduced to make the process of learning to drive a safer experience. New drivers are required to go through three stages to obtain a full Class 5 license:

STAGE 1 – LEARNER CLASS 7

- Must be 15 years of age.
- Must pass a written examination.
- The Learner’s Stage lasts for a minimum of 12 months, providing the driver remains suspension-free.

Conditions

- A Learner must drive with a fully licensed driver who has a minimum of 24 months experience with a full Class 5 license.
- Time spent suspended will have to be made up before moving on to the next stage.
- A Learner cannot have any passengers other than the supervisor.
- A Learner cannot drive between the hours of 11 p.m. and 6 a.m.
- A Learner must have a 0 blood alcohol content (BAC).
- A Learner is subject to a lower demerit point threshold.

STAGE 2 – PROBATIONARY CLASS 5P

- Must be 16 years of age.
- Must have completed the 12-month Learner Stage.
- Must pass a practical road examination.
- The Probationary Stage lasts for a minimum of 12 months, providing the driver remains suspension-free.

Conditions

- No supervisor required.
- The number of passengers for a probationary driver can be equal to the number of seat belts available in the vehicle.
- Only one passenger is permitted in the front seat.
- A Probationary Driver must have a 0 BAC.
- A Probationary Driver is subject to a lower demerit point threshold.

STAGE 3 – FULL CLASS 5

- Must be 17 years of age.
- Must have completed the Probationary Stage.

Section 6 - Vehicle Factors

There was a total of 740 vehicles involved in 414 collisions in 2023. This is an average of 1.79 vehicles per collision. This section provides details on the different vehicle types involved in collisions.

Section 7 - Victims and Occupant Restraints

The TCIS attempts to capture information on all road users involved in collisions, whether they are injured or not.

This data can be used to calculate exposure rates for road users by injury severity, age, road user class, gender and many other variables.

Of interest is the relationship between the severity of injury to motor vehicle occupants and seat belt use. Unrestrained occupants are more than three times as likely to suffer injuries compared to restrained occupants. The severity of injury is lower for victims using seat belts.

The proper use of seat belts is an important factor when evaluating their effectiveness in reducing or preventing injuries. This is especially true of young children and the use of child restraints. Based on a survey conducted on behalf of Transport Canada in 2010, approximately 98% of children were restrained in the NWT. The survey further estimated that only 56% of these children were in a correctly installed device or one that is appropriate for the size and age of the child.

Section 8 - Pedestrians

This section presents a summary of collisions involving pedestrians. For 2023:

- 4 pedestrians were injured;
- no pedestrians were killed;
- 2 of the 4 pedestrians injured were over the age of 25;
- 3 of the 4 pedestrians were injured within a community;
- One pedestrian was under the influence of alcohol.

Section 9 - Alcohol

On December 1, 2004, new measures were introduced to reduce impaired driving in the NWT:

- Drivers caught with .05 to .08 BAC automatically have their driver's license suspended for 24 hours for a first offence, or 30 days for further offences within a two-year period.
- Novice drivers with any BAC automatically have their driver's license suspended for 30 days.
- Drivers caught with over .08 BAC or who refuse to provide a breathalyzer sample automatically have their driver's license suspended for 24 hours, are given a seven day temporary driver's permit and then further suspended for 90 days, in addition to *Criminal Code* charges for impaired driving.
- Drivers convicted of impaired driving under the *Criminal Code* are automatically prohibited from driving for:
 - 1 year for a first conviction;
 - 3 years for a second conviction;
 - 5 years for a third conviction;
 - 5 or more years for additional convictions or if the offence caused a death.
- Drivers wishing to have their driving privileges reinstated after an administrative license suspension are required to pay reinstatement fees and may be required to satisfy conditions including:
 - An alcohol dependency assessment;
 - A driver assessment;
 - Participation in a driver improvement program;
 - Participation in an alcohol dependency awareness program;
 - Participation in an alcohol treatment program;

- Participation in an alcohol ignition interlock program, or
 - Any other condition the Registrar considers appropriate.
- Police have the authority to impound a vehicle for 30 days if the vehicle is operated by a driver whose driving privileges are suspended.

In 2023, there were 21 collisions involving alcohol, resulting in 10 persons being injured. There was one alcohol-related fatality in 2023. Alcohol-related injuries are significantly below the 35-year average.

Section 10 - Off-Road Vehicles

Off-road vehicles, including snowmobiles and all-terrain vehicles (ATVs) are a common form of transportation in isolated communities in the NWT. From the figures presented in this section, the facts below should be noted:

- 50% of off-road vehicle collisions resulted in injuries;
 - One collision resulted in a fatality;
 - 18% of off-road vehicle drivers in collisions had been drinking or were impaired by alcohol;
 - Less than 40% of off-road vehicle drivers or passengers in collisions were wearing helmets;
 - 76% of the off-road vehicles involved in collisions were ATVs.
-

Section 11 - Geographic Distribution

This section presents a detailed summary of collisions by region, RCMP detachment and severity. 65% of collisions took place in the North Slave region. The North Slave region also accounted for 41% of persons injured. One fatality took place in the Beaufort Delta region, one occurred in the Sahtu Region and two took place in the North Slave Region.

A map detailing collisions that occurred on the NWT Highway system is shown on Page 53. Highway 3 (Yellowknife Highway) accounted for 42% of collisions occurring on the 10 numbered highways.

Section 12 – National Comparison

This section compares injury and fatality rates for Canadian jurisdictions for the 2022 calendar year. This is the most recent year for which complete data is available. Fatality and injury rates are shown; per 100,000 population, per billion vehicle-kilometres of travel, and per 100,000 licensed drivers for each province and territory. The casualty rates for the NWT are less than the Canada average for all of the six indicators.

Definitions

REPORTABLE MOTOR VEHICLE COLLISION - An incident involving one or more motor vehicles resulting in death, personal injury or a minimum of \$2,000 in property damage. The TCIS only records reportable motor vehicle collisions that occur on, or adjacent to, roadways intended for use by the general public. The following is a list of words and terms used in reportable collisions:

INCIDENT - Any set of events not under human control that includes at least one occurrence of injury or damage. It originates when human control is lost and terminates when control is regained, or in the absence of persons who are able to regain control when all persons and property are at rest.

Excluded are events which are known to be the result of deliberate intent, legal intervention or natural disasters. As an example, if a vehicle catches fire due to mechanical failure and the driver is able to stop the car, this is not a traffic collision because control of the vehicle was never lost.

VEHICLE - is any vehicle designed to travel on land that is drawn, propelled or driven by any kind of power, including muscular power, but does not include a device designed to run exclusively on rails.

MOTOR VEHICLE - is a vehicle propelled or driven by power other than by wind, gravity or muscular power and includes a trailer, but does not include: an aircraft or a marine vehicle, a device that runs or is designed to run exclusively on rails, a mechanically propelled wheelchair or mobility device.

PEDESTRIAN - is a person on foot, in a wheelchair or mobility device and includes a child in a carriage or carried by a person on foot, persons on ice skates, skis, roller blades, skateboards and persons pushing or pulling vehicles. A pedestrian does NOT include persons jumping or falling from a vehicle in motion.

ALCOHOL IMPAIRED – driver was tested for alcohol and had a blood alcohol concentration at or above the legal limit of 80 mg%.

ALCOHOL INVOLVED – driver was not tested but alcohol was determined by the investigating officer to be a contributing factor. This also includes drivers

tested for alcohol and had a blood alcohol concentration greater than zero but less than the legal limit.

DAMAGE - harm to property that reduces the monetary value of that property. It includes harm to animals that have monetary value. It excludes mechanical failure incurred by normal operation such as a tire blow out or broken fan belt.

ROADWAY - any highway, secondary road, rural road, street, avenue, parkway, lane, alley or bridge designed and intended for, or used by, the general public for the passage of vehicles and pedestrians. This includes sidewalks, boulevards and the immediate right-of-way adjacent to and parallel with the roadway. It also includes winter/ice roads, trails, privately maintained roads, driveways and parking lots on which the general public may travel.

NWT HIGHWAY COLLISION – a collision occurring on one of the ten numbered highways or on an access or winter road maintained by the GNWT.

COMMUNITY COLLISION – a collision occurring within the corporate limits of a community but not on any of the roads on the NWT highway system.

RURAL COLLISION – a collision occurring outside of the corporate limits of a community and off of any of the roads on the NWT highway system.

PROPERTY DAMAGE ONLY COLLISION (Property Damage) - a motor vehicle collision resulting in total damages over the prescribed amount as defined in the Motor Vehicles Act (\$2,000) with no personal injuries or deaths.

INJURY COLLISION (Personal Injury) - a motor vehicle collision resulting in a non-fatal injury to one or more persons. An injury is defined as any bodily harm resulting from the collision.

FATAL COLLISION (Fatal) - a motor vehicle collision resulting in death within 30 days to one or more involved persons. Death must be the result of injuries incurred from the collision. This excludes death from natural causes such as heart attacks.

Major Contributing Factors by Collision Severity

Figure 3.6

TCIS recognizes that a collision is usually the result of a chain of events. The collision data system accepts up to four contributing factors for each vehicle involved in a collision. During the analysis of collisions, knowledge of the factors is important. By removing any one of the factors, the collision may be avoided.

An example: Because of inattention, a driver may have failed to see a stop sign behind some trees and thereby reduced his/her stopping time. The car's brakes, being in poor condition, caused the car to spin out of control on ice and collide with another vehicle that was speeding through the intersection. The collision may not have occurred if any of these factors were not present.

Drivers in Collisions and Relative Risk by Driver Age

Collision Rates (Collisions Per 1,000 Licensed Drivers) by Severity and Driver Age

Figure 5.2

	15 to 19	20 to 24	25 to 34	35 to 44	45 to 54	55 to 64	65 and Over	Average Rate
Property Damage	15.8	22.6	16.7	15.9	16.5	14.9	14.7	19.7
Personal Injury & Fatal	11.6	4.1	2.4	2.3	2.8	3.6	4.1	3.5
Total	27.4	26.7	19.1	18.2	19.3	18.5	18.8	23.3
Relative Risk*	1.2	1.1	0.8	0.8	0.8	0.8	0.8	1.0

* Relative Risk = (% of drivers in collisions in age group)/(% of total licence holders in age group)

The age of drivers involved in traffic collisions can form the basis of various analysis and countermeasure programs. The reason for this interest is the over-involvement of young drivers in collisions and the disproportionately large number of charges laid as a result of collisions.

Figure 5.1 shows that the relative risk of drivers between the ages of 15 and 19 are 1.2 times more likely to be involved in a collision than the average driving population. On average, 3% of 15 to 19 year olds were involved in collisions, compared to 2% of 35 to 44 year olds.

Other factors such as exposure, risk, experience, alcohol, and vehicle type must be known to fully understand the relationship of driver age and collision involvement. Studies indicate that the risk of having a collision is a factor of driving experience, not just driver age.
